CUFDIG303A	**Produce and prepare photo images**
CUFDIG303A1	Use scanner to capture photo images
CUFDIG303A2	Use digital camera to create photo images
CUFDIG303A3	Edit photo images.
CUFDIG303A4	Prepare photo image assets.

Mythical Me

This assignment was designed to get the students using Photoshop for the first time. Using artificial lighting and a white backdrop, they took a photograph of themselves (something most students seem to enjoy). Then using the Internet to source mythical elements, they had to create a mythical version of themselves. It introduces the students to the scanner, layers, selection tools, free transform, image adjustments and saving different file types.

Task

You are required to create a mythical creature out of a photograph of yourself. You must take the photograph using the schools camera's and download it onto a computer. Consider your lighting, how it will effect shadow and the camera angle.

It must include the following:

- A minimum of 6 layers
- A feathered selection
- One layer must have some colour adjustment
- One layer must have the levels adjusted
- Brushes used on one layer
- Two layers must include a scanned image.
- Saved and submitted as two separate files
    - o Saved an RGB Photoshop file
    - o Saved for the web (smallest file size + good quality)

You will be marked on technical skill, creativity and originality.
